No. is the number of results predicted by chance to have an score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The peptides AAB37001-B37058 represent examples CC of the peptide portion of the conjugate. The peptides represent analogues CC fa BC1-2 superfamily polypeptide corresponding to amino acids 72-97 of CC the BH3 domain of the cell death agonist Bad. The peptide conjugate is useful for modulating apoptosis in the cells of a subject, or for C apoptosis in cancer cells. It is also useful for inhibiting Bc1-2 subject with a cancer characterized by cancer cells that C express Bc1-2. The cancer includes prostate, colorectal, gastric, CC non-small lung, renal or thyroid cancers, neuroblastoma, melanoma, or caute or chronic lymphocytic and non-lymphocytic leukemia. The peptide conjugate is also useful for resting disorders, acquired by immunodeficiency syndrome (AIDS), stroke or myocardial infarction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This sequence represents a bcl homology domain 3 (BH3 domain) of the invention, derived from a proappototic member of the BCL-2 family. The BH3 polypeptide can be used in a method for promoting appotosis in a target cell, especially where the cell is a cancer cell a virus infected cell or an autoantibody producing cell. The BH3 polypeptide can be used in therapeutic compositions for treating disease including cancer, other lymphoproliferative conditions, arthritis, inflammation, and autoinmune diseases, which may result from the down regulation of cell death
and for Bak's cell killing function; and to peptides and/or molecules capable of mimicking its structure and/or function. The present sequence represents a GD domain corresponding to maino acid residues 52-77 of Bax. An antibody raised against a GD domain may be used to screen a CDNA expression library for clones comprising CDNA inserts encoding immunocrossreactive proteins. Truncated GD domain peptides have been shown to maintain the protein binding and cell killing function exhibited by wild type Bak. These molecules may induce apoptosis in
                                                                                                                     The term GD domain refers to a protein domain first identified in Bak and shown to be essential for the interaction of Bak with Bcl-x(L)
                                                                                                                                                                                                             Peptide(s) comprising GD domains - have similar activities to wild type Bak, and cause cellular apoptosis for treatment of viral
                                                                                                                                                                                                                                                                                                    Chittenden TD,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       tumour cell. These peptides act independently of p53 status. Bak or GD domain mimetics that inhibit Bcl-2 may be selectively toxic to certain tumours, e.g. follicular lymphoma, which depend on high levels of Bcl-2 for their continued growth and survival. GD domain mimetics may also be used for combatting viral infections by causing apoptosis of infected cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel polynucleotide encoding a BBC3 protein which is useful for modulating apoptosis, especially in the treatment of cancer and autoimmune diseases -  \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{

The present invention describes an isolated or synthetic polypeptide (CI) comprising a less than full length amino acid sequence of a mutant CC Bcl XL/Bcl-2 associated cell death regulator polypeptide (BAD) or its CC fragment, which contains amino acid substitutions at Serl18 of a human CC BAD, Serl55 of a murine BAD (longer murine BAD) or Serl13 of a murine BAD). (I) has immunostimulant, neuroprotective, CC mootropic, antiischaemic, vulnerary, cytostatic, antivital, and cc an be used as an apoptosis inducer or inhibitor. BAD polypeptides and CC polynucleotides can be used for screening candidate compounds and drugs cf for activity that promote cell survival or apoptosis. Other uses include cidentified and (mutant) BAD polypeptides are useful in treating cidenth, reperfusion cell death, wound healing, cancer, viral infections, (Canthamune diseases. The present sequence represents a Bcl-family member CC BH3 domain consensus sequence which is used in an example from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      immunostimulant; neuroprotective; nootropic; antiischaemic; vulnerary; cytostatic; antiviral; antiarthritic; antinflammatory; wound healing; immunosuppressive; apoptosis inducer; apoptosis inhibitor; cancer; immunodeficiency disease; neurodegenerative disease; viral infection; ischaemic cell death; reperfusion cell death; arthritis; infertility; lymphoproliferative condition; inflammation; autoimmune disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAB70373 standard; Peptide;

                                                                                                                                                                                                                                                                                 The invention relates to a peptide conjugate having the formula:

CC (R-X)n-peptide where n = 1-10; x = C-0, when the R-X group is attached CC to the functional group of the peptide, or a side chain of the peptide where CC the functional group of the side chain is NH2 or OH; or x = 0 or NH.

CC side chain of the peptide, where the side chain functional group is COOH CC or COOH2; and R = 2-18C alkyl or alkxy y 2-14C alkylenyl containing one CC or two double bonds, cyclobutyl, cyclopentyl, cyclohexyl optionally CC monosubstituted with a 1-5C straight or branched chain alkyl group, or benzyl. The peptides AAB37001-B3705B represent examples of the peptide portion of the conjugate. The peptides represent analogues of the peptide portion of the conjugate. The peptides represent analogues of a Bcl-2 superfamily polypeptide corresponding to amino acids 72-97 of CC useful for modulating apoptosis in the cells of a subject, or for creversing B ccll lymphoma/leukemia 2 (Bcl-2)-mediated blockage of CC apoptosis in cancer cells. It is also useful for inhibiting Bcl-2 (C apoptosis in cancer chais. It is also useful for inhibiting Bcl-2 (C express Bcl-2. The cancer includes prostate, colorectal, gastric, conjugate is also useful for treating disorders, acquired conjugate is also useful for treating disorders. Acquired conforms (Altrey expressive characterized by Cancer cells that conforms (Altrey expressive characterized by Cancer cells characterized by Cancer cells characterized by Cancer cells characterized by Cancer cells characterized by Cancer cells characterized by Cancer cells characterized by Cancer cells characterized by Cancer cells characterized by Cancer cells characterized by Cancer cells characterized by Cancer cells characterized by Cancer cells characterized by Cancer cells characterized by Cancer cells characterized by Cancer cells characterized by Cancer cells characterized by Cancer cells characterized by Cancer cells characterized by Cancer cells characterized by Cancer cells characterized by Cancer cells

                                                                                                                                                                                                                                                                                   This sequence represents a bcl homology domain 3 (BH3 domain) of the invention, derived from a proapoptotic member of the BCI-2 family. The BH3 polypeptide can be used in a method for promoting apoptosis in a target cell, especially where the cell is a cancer cell a virus infected cell or an autoantibody producing cell. The BH3 polypeptide can be used in therapeutic compositions for treating disease including cancer, other lymphoproliferative conditions, arthritis, inflammation, and autoimmune diseases, which may result from the down regulation of cell death
                                                                                                                                                                                                                                                  Sequence

The protein consists of first 78 amino acids of human BAX alpha, that includes the N-terminal region and BH3 domain. It lacks the BH1, BH2 and C-terminal transmembrane domains of the full-length BAX alpha. The tBAX protein lacking only the transmembrane domain has been shown to have anti-apoptotic activity. The present sequence is used to treat diseases associated with neuronal apoptories and the present sequence is used to treat diseases associated with neuronal contents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; truncated BAX protein; tBAX78; BAX alpha; BCL-2 family; percentive; neuron; anti-apoptotic; cerebroprotective; neuroprotective; neuroprotosis; treatment; neurodegenerative disease; peripheral nerve injury; spinal cord injury; head trauma; stroke.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Codon, resulting in a truncated protein. However, the domain responsible of or its function is still present in the truncated protein. Bax (Bcl-2 associated x protein) is a proapoptotic member of the Bcl-2 gene family. CC associated x protein is a primary response gene in the Bcl-2 gene family. CC Bax functions as a primary response gene in the p53-regulated apoptotic cC expression of Bax is upregulated at the transcriptional level by p53, and CC Bax mRNA and protein expression have been shown to increase following cC induction of p53. Bax protein can function as a homodimer, or it can the terrodimerise with other Bcl-2 gene family members such as the cc antiapoptotic protein Bcl-2. Heterodimerisation of Bcl-2 family members cC model suggests that the relative amounts of Bcl-2 family members cC model suggests that the relative amounts of Bcl-2 in his in excess, however, Bax homodimers predominate and the cell becomes consceptible to apoptosis following exposure to an apoptotic stimulus. CC additionally, Bax can function in its monomeric form to accelerate cell death. Use of novel adenoviral vectors containing this Bax gene may call cell or pcl adenoviral vectors containing this bax gene may call cell or pcl adenoviral vectors containing this carrying p53 cmutations. In addition, Bax overexpression could provide the apoptotic cell effect of p53 without the need for p53 itself.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches

Bax is a protein which is C associated with the human bol-2 alpha and betta proteins, the sequences of which are given in AAR7104-05 respectively. bol-2 is encoded by a CC of which are given in AAR7104-05 respectively. bol-2 is a protein many continuous protein and is capable of inhibiting apoptosis in many CC protein protein and is thought to function by enhancing the survival of hematopoietic cells of B and T origins rather than directly promoting CC promote cell cycle progression nor does it necessarily alter the dose CC reponse to limiting concentrations of II-3. bol-2 has been shown to come the protein protein apoptotic cell into this 21 kD protein, Bax. Overexpressed Bax accelerates apoptotic cell ideath induced by cytokine deprivation in an CC II-3 dependent cell into, and it also acts to counter the death repressor cell survival or death following an apoptotic stimulus. The invention G substitution or deletion in the BHI or BH2 domains. This makes the content there is at least one amino acid content therepy, controlling hyperplasias and eliminating self-reactive clones in autoimmunity by favouring death effector molecules. Up or equilating bcl-21s beneficial in treatment and diagnosis of immunocce content the protein substantially incapable of binding bax and/or incapable of deficiency diseases, including AIDS and neurodegenerative and isohaemic confedency diseases, including AIDS and neurodegenerative and isohaemic confedency diseases, including AIDS and neurodegenerative and isohaemic confedency diseases, including AIDS and neurodegenerative.

A naturally CC occurring mutant protein (AAX34149) was also isolated. Bax (BCl-2 CASACCIAted x protein) is a proapoptotic member of the Bcl-2 gene family. CC Bax functions as a primary response gene in the p53-regulated apoptotic CC pathway. The Bax gene promoter has 4 p53 binding sites and the CC expression of Bax is upregulated at the transcriptional level by p53, and CC induction of p53. Bax protein can function as a homodimer, or it can beterodimerise with other Bcl-2, heterodimerisation of Bcl-2 family members can heterodimerise with other Bcl-2, heterodimerisation of Bcl-2 family members provides a means of controlling call death via the "rheostat" model. This CC model suggests that the relative amounts of Bcl-2 is in excess, conceptibility of a cell to undergo apoptosis. If Bcl-2 is in excess, so asceptible to apoptosis following exposure to an apoptotic stimulus. CC Additionally, Bax can function in its monomeric form to accelerate cell cath. Use of novel adenoviral vectors containing the Bax gene may CC cell cycle arrest and/or apoptosis in malignant cells carrying p53 cm utations. In addition, Bax overexpression could provide the apoptotic of effect of p53 without the need for p53 itself.

The invention relates to a bcl homology domain 3 (BH3 domain),
derived from a prosportotic member of the BCL-2 family. The
BH3 polypeptide can be used in a method for promoting apoptosis in a
target cell, especially where the cell is a cancer cell a virus infected
cell or an autoantibody producing cell. The BH3 polypeptide can be used
in therapeutic compositions for treating disease including cancer, other
lymphoproliferative conditions, arthritis, inflammation, and autoimmune
diseases, which may result from the down regulation of cell death
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Bcl homology domain 3 polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         WO9916787-A1

The Bax protein is used in a composition which comprises a bcl-2 family member polypeptide, a naturally occurring Bax polypeptide and an antibody that binds to the Bax polypeptide. The composition is used to identify modulators of bcl-2-related function, e.g. substances that inhibit binding of Bax to bcl-2, which would be potentially useful as drugs for modulating
                                                                                                                           10-NOV-1994;

The Bax protein is used in a composition which comprises a bc1-2 family member polypeptide, a naturally occurring Bax polypeptide and an antibody that binds to the Bax polypeptide. The composition is used to identify modulators of bc1-2-related function, e.g. substances that inhibit binding of Bax to bc1-2, which would be potentially useful as drugs for modulating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human: truncated BAX protein: tBAX; BAX alpha; BCL-2 family; head trauma; neuron; anti-apoptotic; cerebroprotective; neuroprotective; neuroactive; apoptosis; treatment; neurodegenerative disease; peripheral nerve injury; spinal cord injury; stroke; pro-apoptotic; PCD; programmed cell death.

                                                                                                                                                                                                    The present sequence is a human BAX alpha protein, a pro-apoptotic protein which is a member of BCL-2 family of proteins that are involved in regulation of neuronal programmed cell death. The patent discloses specific truncated proteins derived from BAX alpha which inhibit neuronal apoptosis induced by trophic factor deprivation. The anti-apoptotic truncated BAX (tBAX) proteins include tBAX70, tBAX78 and their mutants. These proteins contain the N-terminal region and at least a portion of the BH3 domain of BAX alpha and lack the BH1, BH2 and C-terminal transmembrane domains. The tBAX protein lacking only the transmembrane domain has been shown to have anti-apoptotic activity. The tBAX proteins are used to treat diseases associated with neuronal apoptosis, e.g. neurodegenerative diseases, peripheral nerve injury, spinal cord injury, head trauma and stroke.
                                                                                                                                                                     Sequence

Perfect score:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Run on:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               OM protein -
              Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
           protein search, using sw model
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Issued_Patents_AA:*

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Tilly J.L., Tilly K.I., Kenton M.L., Johnson A.L.;

"Expression of members of the bcl-2 gene family in the immature rat ovary: equine chorionic gonadotropin-mediated inhibition of granulosa cell apoptosis is associated with decreased bax and constitutive bcl-2 and bcl-xiong messenger ribonucleic acid levels.";
Endocrinology 136:232-241(1995).

-1- FUNCTION: ACCELERATES PROGRAMED CELL DEATH BY BINDING TO, AND ANTAGONIZING THE APOPTOSIS REPRESSOR BCL-2 OR ITS ADENOVIRUS HOMOLOG ELB 19K PROTEIN. INDUCES THE RELEASE OF CYTOCHROME C, ACTIVATION OF CASPASE-3, AND THEREBY APOPTOSIS.

-1- SUBGUNIT: FORMS HOMODIMERS AND HETERODIMERS TOGETHER WITH BCL-2, ELB 19K PROTEIN, BCL-X(L), MCL-1 AND A1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      magison D.L., Pfeiffer S.E.;
